

AI POS Training Package — Read Me First

Package updated 25 July 2026.

Welcome. This package contains everything you need to build your own AI Personal Operating System.

First, the practical bit: extract the whole zip and keep the folders together — the structure matters. Then start in `0 - Start Here` and read files 1, 2 and 3 in order.

One thing to understand before you open anything: the folders are groupings, not steps. You don't work through them in order — you'll move between them as you build.

Folder	What it holds
<code>0 - Start Here</code>	The concepts and the build roadmap — begin here, read files 1, 2, 3 in order
<code>1 - Copy this onto your C drive</code>	A ready-made empty AI POS folder — copy it to your C drive and rename it to <code>AI Access</code>
<code>2 - Build Guides</code>	Guides you work through in conversation with AI
<code>3 - Templates</code>	Blank files your conversations turn into your system
<code>4 - Mo's AI Access</code>	A complete worked example — the finished destination

The roadmap (`0 - Start Here/3 - Build Roadmap and Checklist.pdf`) is the only sequence. Every step in it names the exact file and folder you need, so you never have to guess where to look next.
